

New

- Tall plant with strong stalk for good standability.
- High grain to stover ratio for increased digestibility.
- Wide leaves produce a dark, dense canopy for superior weed suppression and moisture conservation.

This hybrid produces a very high grain yield on strong sturdy stems 6 to 8ft. tall. Its high grain to stover ratio significantly increases digestible dry matter produced per unit area as silage. The high protein content and total digestible nutrients make this a perfect forage for the feedlot or dairy.

Characteristics

Plant Color	Purple
Plant Texture	Normal
Standability	Excellent
Plant Height	6-8 feet
Panicle Type	Grain
Midrib Type	Normal
Tillering/Regrowth Capacity	Good
Grain Color Planted	Red

Maturity

Days to 50% Anthesis	85-90
Harvested Grain Tannin	Yes
Harvest Mode	H/S
Irrigated Tons/Acre	20-25

Planting

Approx Seeds/Lb	15,500
Lbs/Acre Dryland Row	5-8
Lbs/Acre Dryland Broadcast	N/A
Lbs/Acre Irrigated Row	8-12
Lbs/Acre Irrigated Broadcast	N/A
