

- Brown Midrib
- Late Maturity (LM) sorghum sudangrass
- High palatability
- Multi-purpose forage
- Wider window for harvest
- Higher protein and digestibility than conventional sorghum/sudangrass hybrids
- High green leaf retention
- Excellent drought resistance
- Excellent tillering, regrowth, and recovery

Brown Midrib (BMR) gives more value to this Late Maturity (LM) hybrid. The late maturity concept produces hybrids that are 20-30 days later than conventional ssh's. This late maturity allows a wider window for harvest of high quality leaves before boot stage is reached. This LM/BMR hybrid produces greater IVTD values and a higher crude protein. IVTD of this BMR hybrid was 20+% more than a commercial check in trials. This hybrid has a wide range of adaptation because of its excellent drought resistance and yield of quality forage for direct pasture and hay.

### Characteristics

Plant Color	<b>Purple</b>
Plant Texture	<b>Juicy</b>
Standability	<b>Excellent</b>
Plant Height	<b>7-8 feet</b>
Panicle Type	<b>Sudan</b>
Midrib Type	<b>BMR</b>
Tillering/Regrowth Capacity	<b>Very Good</b>
Grain Color Planted	<b>Red</b>

### Maturity

Days to 50% Anthesis	<b>90-100</b>
Harvested Grain Tannin	<b>No</b>
Harvest Mode	<b>H/G</b>
Irrigated Tons/Acre	<b>25-30</b>

### Planting

Approx Seeds/Lb	<b>17,000</b>
Lbs/Acre Dryland Row	<b>5-15</b>
Lbs/Acre Dryland Broadcast	<b>15-20</b>
Lbs/Acre Irrigated Row	<b>10-15</b>
Lbs/Acre Irrigated Broadcast	<b>35-40</b>
